

Reading Progress Tracker

A full-stack web application that allows users to manage their personal library, track reading progress, write notes and reviews, and organize books into collections.

Angular 17	Django + DRF	JWT Auth	SQLite	SimpleJWT	CORS
------------	--------------	----------	--------	-----------	------

Core Features	Group Members
■ Register / Login with JWT tokens ■ Browse & add books to reading list ■ Track pages read and reading status ■ Write notes per book and page ■ Leave star ratings and reviews ■ Organize books into collections ■ Edit personal bio / profile	■ Adina Nurbergenova — Full-stack ■ Fazylbek Assylzat — Full-stack ■ ■ GitHub Repository: ■ github.com/auylyua/webdev-project ■ ■ Stack: Angular (frontend) ■ Django REST Framework (backend)

Backend — Django + DRF

Models (6 total)

Book	title, author, total_pages, genre, cover_image	— (base entity)
ReadingEntry	current_page, status, started_at, finished_at	FK → User, FK → Book
Note	text, page_number, created_at	FK → User, FK → Book
Review	rating (1–5), comment, created_at	FK → User, FK → Book
UserProfile	bio, avatar_url	OneToOne → User
Collection	title, description, is_public	FK → User, M2M → Book

Serializers

■ serializers.Serializer (2):

■ LoginSerializer

■ ProgressUpdateSerializer

■

■ ModelSerializer (8):

■ BookSerializer, RegisterSerializer

■ ReadingEntrySerializer, NoteSerializer

■ ReviewSerializer, CollectionSerializer

■ UserProfileSerializer, PublicUserSerializer

Views

■ FBV @api_view (9):

■ register, login, logout

■ top_books, currently_reading

■ user_reviews, user_collections

■ collection_book, home_stats

■

■ CBV APIView (8):

■ BookList/Detail, EntryList/Detail

■ MyProfile, PublicUserProfile

■ CollectionList/Detail

Frontend — Angular 17

Components & Routes

- /home — landing page
- /login — sign in / register tabs
- /catalog — browse & add books
- /my-progress — track reading
- /profile — notes, reviews, bio
- /collections — book collections

Angular Requirements Met

- JWT interceptor via withInterceptors()
- AuthGuard (CanActivateFn) on routes
- ApiService with HttpClient
- 10+ [(ngModel)] bindings
- 10+ (click) event handlers
- *ngFor on books, entries, notes...
- *ngIf for modals, auth state
- [ngClass] for status badges
- [style.width.%] progress bar
- Error handling in all components

Key API Endpoints

POST	/api/login/	Authenticate user, return JWT tokens
POST	/api/register/	Create account + auto-login
GET	/api/books/	List all books (filter by genre, search, sort)
POST	/api/entries/	Add book to reading list (auth required)
PATCH	/api/entries/{id}/	Update page, status, rating
DELETE	/api/entries/{id}/	Remove book from reading list
POST	/api/notes/	Add a note linked to user + book
POST	/api/reviews/	Submit a book review (rating 1–5)
PATCH	/api/profile/	Update bio
GET	/api/books/top/	Top-rated books (annotated queryset)
POST/DELETE	/api/collections/{id}/books/{book_id}/	Add/remove book from collection

Requirements Coverage

Backend Checklist

- ✓ 4+ models (6 implemented)
- ✓ 2+ ForeignKey relationships (6+)
- ✓ 2 serializers.Serializer
- ✓ 2+ serializers.ModelSerializer (8)
- ✓ 2+ FBV with @api_view (9)
- ✓ 2+ CBV with APIView (8)
- ✓ Token-based auth (SimpleJWT)
- ✓ Full CRUD for ReadingEntry
- ✓ request.user linkage everywhere
- ✓ CORS configured (django-cors-headers)
- ✓ Postman collection in repo

Frontend Checklist

- ✓ Interfaces + services for APIs
- ✓ 4+ (click) events triggering API
- ✓ 4+ [(ngModel)] form controls
- ✓ Basic CSS styling
- ✓ 3+ named routes with navigation
- ✓ *ngFor and *ngIf used throughout
- ✓ JWT interceptor for HTTP requests
- ✓ Login page + logout functionality
- ✓ 1+ Angular Service (ApiService)
- ✓ API error handling in all views
- ✓ README with description + members

Project Summary

- Full-stack app: Angular 17 frontend + Django REST Framework backend
- 6 Django models, 10 serializers, 9 FBV + 8 CBV, full CRUD on ReadingEntry
- 6 Angular routes, JWT auth with interceptor + guard, 10+ ngModel + click events
- Postman collection, 31 commits, clean project structure with /backend /frontend /postman
